

I manage a trucking company. All my drivers have XM radios in their trucks as do many commercial truck drivers. My drivers as well as tens of thousands on other truck drivers frequently listen to the traffic and weather service offered by XM to make them safer on our nation's highways. Anything that improves the awareness level of travelers improves safety and thus possibly saves lives. I have yet to find a local radio station that can equal the promptness, preciseness and frequency of XM. Local radio typically only offer traffic info during peak times as opposed to XM's 24/7. XM is quickly replacing the CB radio in trucks. In the words of Martha Stewart- "and that's a good thing". XM offers an excellant service with their traffic and weather channels. Please keep them.
